## Selket, a tiny Static Site Generator

*Subhaditya Mukherjee*

### 1. Steps to make a site

- 1) `pip install -r requirements.txt`
- 2) Initialize with  
`python selket/runner.py -n "mysimplesite"`
- 3) Edit `config.json` to your liking
- 4) Add whatever you want to `index.md`
- 5) Add some posts

#### 1.1. To make a post

- 6) Run  
`python runner.py -n "mysimplesite" -p True`
- 7) Fill in the title etc
- 8) Edit the file that was created

#### 1.2. To generate site

- 9) To serve locally  
`python runner.py -n "mysimplesite" -s True`
- 10) Then open the link that is displayed
- 11) To just generate  
`python runner.py -n "mysimplesite" -p True`

#### 1.3. Some special syntax

**These can be entered in your markdown files**

**[index] will insert a custom index in the page**

- 13) `[total_posts]` count of total files in `_posts/`
- 14) `[title]` title of the current document taken from the tags

### 2. Tips

## 2.1. Math support

15) If you want to add math support to your websites, add the following code to the head of the layout

```
““js script type="text/javascript" async
src="https://cdnjs.cloudflare.com/ajax/libs/mathjax/2.7.7/MathJax.js?config=TeX-MML-AM_CHTML">
/script>
““
```

1) Then you have to add  $equation$  and it should work

## 2.2. Image size

2) Markdown supports html syntax, so if you want a different image size, just add it as an html

## 3. Code stats so far

Language	Files	Lines	Code	Comments	Blanks
Markdown	2	32	0	25	7
Python	5	348	294	2	52
Shell	1	8	8	0	0
Total	8	388	302	27	59
