Selket, a tiny Static Site Generator

Subhaditya Mukherjee

1. Steps to make a site

1) pip install -r requirements.txt
2) Initialize with

python selket/runner.py -n "mysimplesite"
3) Edit config.json to your liking
4) Add whatever you want to index.md
5) Add some posts

1.1. To make a post

6) Run

python runner.py -n "mysimplesite" -p True
7) Fill in the title etc
8) Edit the file that was created

1.2. To generate site

9) To serve locally

python runner.py -n "mysimplesite" -s True
10) Then open the link that is displayed
11) To just generate

python runner.py -n "mysimplesite" -p True

2. Tips

2.1. Math support

12) If you want to add math support to your websites, add the following code to the head of the layout

'''js script type="text/javascript" async

src="https://cdnjs.cloudflare.com/ajax/libs/mathjax/2.7.7/MathJax.js?config=TeX-MML-AM_CHTML">
/script>

'''

2.2. Image size

1)   Markdown supports html syntax, so if you want a different image size, just add it as an html

3. Code stats so far

Language	Files	Lines	Code	Comments	Blanks
Markdown	2	32	0	25	7
Python	5	348	294	2	52
Shell	1	8	8	0	0
Total	8	388	302	27	59
